# Selection: Semi-hermetic Reciprocating Compressors

## Input Values

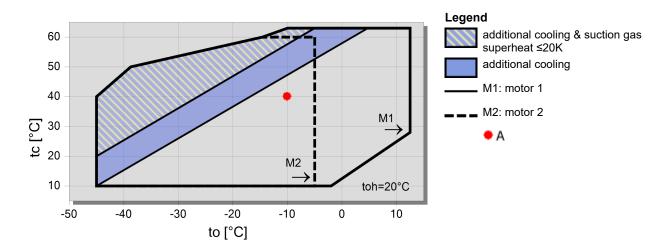

Compressor model Mode	4EES-6 Refrigeration and air conditioning		
Refrigerant	R22	40,0°C	
Reference temperature	Dew point temp.	40,0 C	<b>98.8°C</b>
Evaporating SST	-10,00 °C	~~~~	
Condensing SDT	40,0 °C		
Liq. subc. (in condenser)	0 K	40,0°C	
Suct. gas superheat	10,00 K	Ż	0,0°C
Operating mode	Auto		
Power supply	400V-3-50Hz	Υ	0.0°C
Capacity control	100%	4EES-6 (100%)	-10,0°C
Useful superheat	100%		

#### Result

Compressor	4EES-6-40S
Capacity steps	100%
Cooling capacity	11,38 kW
Cooling capacity *	11,69 kW
Evaporator capacity	11,38 kW
Power input	4,29 kW
Current (400V)	7,92 A
Voltage range	380-420V
Condenser capacity	15,66 kW
COP/EER	2,65
COP/EER *	2,73
Mass flow	258 kg/h
Operating mode	Standard
Discharge gas temp. w/o cooling	98,8 °C

Tentative Data. \*According to EN12900 (20°C suction gas temp., 0K liquid subcooling)

Vibration dampers Standard
Oil charge 2,00 dm <sup>3</sup>
Discharge shut-off valve Standard
Suction shut-off valve Standard
Available options
Discharge gas temperature sensor Option
Capacity control 100-50% (Option)
Capacity Control - infinite 100-10% (Option)
Additional fan Option
Oil heater 0120 W PTC (Option)
Oil level monitoring OLC-K1 (Option)
Sound measurement
Sound power level (+5°C / 50°C) 68,2 dB(A) @ 50Hz
Sound power level (-10°C / 45°C) 71,6 dB(A) @ 50Hz
Sound power level (-35°C / 40°C) 72,5 dB(A) @ 50Hz
Sound pressure level @ 1m (+5°C / 50°C) 60,2 dB(A) @ 50Hz
Sound pressure level @ 1m (-10°C / 45°C)         63,6 dB(A) @ 50Hz           Sound pressure level @ 1m (-35°C / 40°C)         64,5 dB(A) @ 50Hz

# **Semi-hermetic Reciprocating Compressors**

**Motor 1 =** e.g. 4TES-12 with 12 "HP", primary for air-conditioning (e.g. R22,R407C) and air-conditioning with R134a at high ambient temperatures.

**Motor 2 =** e.g. 4TES-9 with 8 "HP", universal Motor for medium and low temperature application (e.g. R404A, R507A, R407A, R407F) and air-conditioning with R134a

Motor 3 = e.g. 4TES-8, for medium temperature applications and R134a

For more information concerning the application range use the "Limits" button.

#### Operation modes 4VES-7 to 6FE-44 and 44JE-30 to 66FE-88 with R407F/R407A/R22

CIC = liquid injection with low temperature application, suction gas cooled motor.

## ASERCOM certified performance data

The Association of European Refrigeration Component Manufacturers has implemented a procedure of certifying performance data. The high standard of these certifications is assured by:

- \* plausibility tests of the data performed by experts.
- \* regular measurements at independent institutes.

These high efforts result in the fact that only a limited number of compressors can be submitted. Due to this not all BITZER compresors are certified until now. Performance data of compressors which fulfil the strict requirements may carry the label "ASERCOM certified". In this software you will find the label at the respective compressors on the right side below the field "result" or in the print out of the performance data. All certified compressors and further information are listed on the homepage of ASERCOM.

## **Condensing capacity**

The condensing capacity can be calculated with or without heat rejection. This option can be set in the menu Program 
Options. The heat rejection is constantly 5 % of the power consumption. The condensing capacity is to be found in the line Condensing cap. (with HR) resp. Condensing capacity.

#### Data for sound emission

Data based on 50 HZ application (IP-units 60 Hz) and R404A if not declared. Sound pressure level: values based on free field area conditions with hemisperhical sound emission in 1 meter distance.

## General remarks regarding sound data

Listed sound data were measured under testing conditions in our laboratory. For this purpose the free-standing test sample is mounted on a solid foundation plate and the pipework is connected vibration-free to the largest extend possible. Suction and discharge lines are fixed in a flexible configuration, such that a transmission of vibrations to the environment can be largely excluded. In real installations considerable differences might be observed, compared to the measurements in the laboratory. The airborne sound emitted by the compressor can be reflected from surfaces of the system and this may increase the airborne sound level measured close to the compressor. Vibrations caused by the compressor are also transferred to the system by the compressor feet and piping depending on the damping ratio of the fixings. Thus, the vibrations can induce other components to such an extent that these components contribute to an increase in airborne sound emission. If required, the transfer of vibrations to the system can be minimized by suitable fixing and damping elements.
